# Chu-Yin Weng

(516) 816-6936 | cw749@cornell.edu | cyweng03.github.io/portfolio | github.com/dorawengg

## EDUCATION

**Cornell University | B.S. in Computer Science** May 2026

Minor in Information Science | Cum Laude | Dean's List All Semesters

## TECHNICAL SKILLS

Front End: JavaScript, TypeScript, HTML, CSS, React, Next.js, Tailwind CSS, Three.js

Languages and Frameworks: Ruby, Python, Java, C++, SQL, Ruby on Rails, Sidekiq, RSpec, Streamlit

Tools and Platforms: Figma, Git, Firebase, Supabase, PostgreSQL, Snowflake, AWS (Glue, S3, EventBridge, CDK)

## EXPERIENCE

**Software Engineer | Kikoff** Aug 2026 - Present

- Built a full-stack office-navigation platform with interactive maps and meeting-room search, integrating NFC stickers for mobile access; partnered with Infrastructure and Information Security to enable access without a corporate VPN.
- Halved operator time for credit-reporting uploads by moving processing to asynchronous, concurrent Sidekiq jobs and improving the UI to clearly communicate upload status and results.
- Developed an identity-verification backend for onboarding workflows serving 250K+ users monthly; collaborated with vendor engineers and Compliance on multi-stage verification and validated the integration through shadow runs, Snowflake analysis, and A/B testing.

**SDE Intern | Amazon Web Services** May - Aug 2025

- Built and deployed an automated validation system using AWS Glue, Apache Spark, EventBridge, and CDK, checking 15K+ daily records in production workflows serving 1M+ customers.
- Reduced debugging time by 20%+ and data quality-related on-call tickets by 25% through early error detection and custom validation rules, improving reliability for 3+ downstream teams.

**R&D Intern | Industrial Technology Research Institute** Jun - Aug 2024

- Built a local RAG chatbot with Streamlit, LangChain, Llama3, and a 30K+ vector FAISS store; improved answer accuracy by 50% with retrieval and re-ranking, and evaluated reliability using hospital-sourced workflows.

## SELECTED FRONT END AND PRODUCT WORK

**ScholarSAT | Freelance Software Developer** May - Jun 2026

- Built a Next.js and TypeScript application for a tutoring-center client, supporting student score tracking, parent progress viewing, and administrative workflows with Firestore.
- Implemented role-based access with Firebase Auth and custom admin approval, plus a question bank supporting manual entry and PDF/HTML ingestion.

**InteliEQ | Website Redesign** Dec 2025 - Mar 2026

- Redesigned a cleantech startup's marketing website using Next.js, React, and Tailwind CSS; built a responsive, multi-page site to communicate its indoor-air-quality and energy technology to healthcare and commercial decision-makers.

**AguaClara Cornell | Web Development Lead** 2023

- Led a React and Tailwind CSS website redesign that increased page views by 75%; built a JavaScript and JSON content management system supporting 60+ team members.
- Authored technical documentation and set up continuous integration for website deployment and maintenance.
